

Freyssinet's Strand Wire Testing Machine (SWTM) is now fully operational!

INTERNAL NEWS

Yet another milestone: After performing a series of final dry runs, the company is pleased to announce that our Strand Wire Testing Machine (SWTM) situated at the University of the Philippines, Diliman is now fully operational.

July 01, 2016: FIMI and U.P. CoMSLab jointly performed tensile tests that are in accordance with the requirements of ASTM A416/A416M-12a. The tests were witnessed by the representatives of the Skyway Stage 3 Sections 3 & 4 project.

This is by far the one of the most (if not the most) accurate strand-wire tensile test method being performed in the Philippines.

Thanks to the huge efforts of the whole team, from the procurement stage to the dedicated team at the head office and the laboratory, this task would have never been a success without your contribution.

A testament indeed that if we work together, we can move mountains!
